

Healthcare Building Specialists

With over 200 medical projects completed across the country and many more in the design and procurement process, **brp architects** specialise in the design management and delivery of primary and specialist healthcare premises.

Understanding that many GP clients only go through the process once and adopting a nurturing, hand holding approach has proven to be the key to successful project delivery.

Every project is unique, however, the considerable number of healthcare facilities we have been involved with brings with it a raft of beneficial, sector-based experience from which

we draw, smoothing the process, enabling us to guide clients through the strict legislative process, avoid many of the pitfalls and provide high quality, ordered solutions that are imaginative, state of the art and represent value for money.

Projects successfully delivered range from those on tight, urban, brownfield sites to green belt environments, from internal alteration, to extension and refurbishment to new-build, and from stand-alone facilities for single GP practices to multi-user, multi-million pound premises of thirty or more clinicians. A number of our schemes can be viewed in the Health Section of our website.

For a no-obligation appraisal and explanation of how our services can benefit you, please contact us using the details below.
