

BUILDING A HEALTHIER FUTURE TOGETHER

As the UK leader in connected healthcare software and systems, we're passionate about developing innovative solutions that support the health and wellbeing of our population.

We're the number one choice for clinical software in primary care, community pharmacy and A&E care settings, and the number two choice in hospital pharmacy and community care, ensuring healthcare teams across the nation have access to all the information they need to deliver the best possible patient care.

Our systems hold details of 12.6bn consultations, 1.3tn clinical events and interactions and 55bn clinical observations, giving a sense, not only of the scale of our reach, but the unique value we can bring as a clinical research partner.

SUPPORTING A SUSTAINABLE NHS

For over 25 years we've been supporting ethical clinical research with the aim of improving patient outcomes on a national scale. We work with over 30 UK universities on health projects, and co-founded QResearch, one of the world's largest databases of primary care records used for anonymised medical research.

Our collaboration with OpenSAFELY helped to provide powerful, data-driven insights into Covid-19 and wider public health issues, based on real-life GP interactions, resulting in the deployment of updated prescribing guidelines and protocols back into our clinical systems.

Working with MSD and NHS England, we're deploying new technology to help accelerate the early diagnosis and treatment of the estimated 81,000 people unknowingly living with Hepatitis C in England. Our Pathway solution is helping to surface and refer at risk patients, in line with plans to eliminate the blood borne virus ahead of the World Health Organization's 2030 deadline.

Through these partnerships, we're supporting the NHS to focus more on the early diagnosis, treatment and prevention of disease, and harness cutting edge innovation that will improve health outcomes across the nation.

CLOSING THE RESEARCH LOOP

We're committed to the highest clinical standards in every product and service in every healthcare setting, with decades of experience in handling data in the safest and most ethical way. As we develop technology that drives research and innovation, we will only ever work with organisations if it improves clinical safety and patient outcomes.

We believe that through collaboration we can create positive change in healthcare and help to bridge the gap between patients, healthcare professionals and researchers.
